
Gaussian DTMC
Finite-shot executions (n = 400)
Storm reachability checkpoints
Pointwise 95% Wilson interval (a, b)
4 remove this
1 move this in legend, rename "Finite-shot executions (n=400) to "Empirical executions (n=400)"
(a) Cumulative success probability
3 change this title to "Success probability comparison"
K = 50: Gaussian 92.80%
Finite-shot 91.50% (366/400)
95% CI [88.36%, 93.85%]
2 remove this
Success probability (%)
Optimizer iteration k
(b) Prediction discrepancy
ΔP(k) (percentage points)
K = 50: −1.30 percentage points
Optimizer iteration k
(c) First-success outcomes
Empirical labels: number of runs / 400
6 remove this and replace it with the legend in the figure
Outcome probability (%)
169
138
59
34
0
1-20
21-30
31-40
41-50
No success by K = 50
First-success iteration window
(d) Conditional resource consumption
Success by K = 50 only (n = 366)
Gaussian
7 rename it to "Empirical"
Finite-shot
33.111
32.290
Conditional mean iterations
Iteration 95% CI: [31.579, 32.995]
Shots = 9,216 × iterations (same comparison)
Gaussian 305,152.7; finite-shot 297,581.1
Shot 95% CI: [291,034.2, 304,077.6]
p = 0.024; p_Holm = 0.094 (four comparisons)
Marginal CI excludes model; equivalence not established.
5 remove this, and replace it with the figure "Conditional mean shots" just like above
